Why Nashville Neurocare?

We are Tennessee’s most experienced provider TMS Therapy, and we maintain some of the industry’s best patient results. With TMS Therapy, there is hope for relief from depression even after multiple medications have failed to help you.

Discover firsthand how Nashville Neurocare Therapy is using the world’s most advanced treatment techniques to improve the lives of our patients. With our expertise and proven results, let us help you take charge of your life.

Using unique personalized treatment approaches, we don’t just provide symptom improvement; we can get most patients truly well.

We can help you get back to the real you.

Experience Matters.

Nationally recognized, board-certified psychiatrist, W. Scott West, MD blazed the trail for TMS therapy in Tennessee as the first physician to offer this advanced technology. With 30+ years experience in clinical depression, Dr. West leads the Nashville Neurocare team.

Dr. West also served as Medical Director of the Neurobehavioral Unit at St. Thomas Hospital for the past 25 years, and is a member of the clinical faculty in the Department of Psychiatry at Vanderbilt University. Additionally, he is a Diplomate of The American Board of Psychiatry and Neurology in the specialty of Psychiatry and a Distinguished Life Fellow of the American Psychiatric Association.

“Throughout my life, I have suffered from deep depression. When I learned about TMS, I realized there was another tool instead of medication. After TMS, I realized there was an accumulating sense of well-being, and that was something I’ve never experienced before, I was happy! TMS made all the difference in the world.”

TMS or Transcranial Magnetic Stimulation is an advanced technique that uses MRI–strength magnetic energy to target the brain regions that regulate a person’s mood. This approach to treating depression allows our staff of experts to improve the function of these areas, which in turn relieves depression.

Unique features of TMS Therapy include:

- **Non-invasive** (does not involve any surgery, anesthesia or sedation), which is important as it facilitates a treatment that is very safe.

- **Non-systemic** (does not travel through the bloodstream like medication), which allows the therapy to be focused on the regions of the brain that need help.

- **The patient is awake and alert** during treatment, enabling patients to easily and independently come and go to treatment sessions. TMS Therapy can be provided in a convenient outpatient setting.

TMS has a unique way of working when compared to all other treatments for depression. TMS works by stimulating areas of the brain involved in mood regulation that are under active in a person with depression. The MRI–strength magnetic field facilitates neurons to fire releasing chemicals (neurotransmitters). These are the same neurotransmitters that are provided artificially through antidepressant medications.

Also, TMS helps functional connectivity of the brain, so circuits that fire together, wire together. This stimulation results in those areas of the brain returning to a more normal, functional state. TMS Therapy provides superior symptom relief and a sustainable benefit for most individuals even after multiple ineffective attempts with medications.

Is It Right for You?

- Are you taking medication(s) to treat your mood disorder?
- Are you still struggling with your mood disorder despite medication trials?
- Are you experiencing side effects from your medication(s)?
- Have you ever switched medications more than once due to side effects?

Place a check if you answer “yes” to any of the following questions:

If you checked two or more of the above questions, TMS Therapy might be right for you. Contact us to discover how TMS Therapy could change your life for the better.

- **Safe**: No adverse effects on memory or cognition
- **Comfortable**: No need for anesthesia or sedation
- **Outpatient**: Treatments performed in our professional office setting and patients can return to their daily activities post treatment
- **Insurance**: Most private insurance and Medicare cover TMS Therapy
- **Natural**: Your brain is activated to release the needed chemicals necessary for proper mood regulation.
